

GRIPHCON Technologies

A management and technology consulting firm built for execution — helping organizations integrate AI, modernize operations, and deliver complex transformation programs.

Core Competencies

AI & Data. AI strategy and readiness, data engineering, analytics platforms, business intelligence (Microsoft Fabric, Power BI, Power Platform, Tableau).

Digital Transformation. Operating model redesign, legacy modernization, transformation governance and delivery.

Technology Consulting. Architecture advisory, platform selection, program delivery, and technical due diligence.

Business Process Optimization. Process analysis, automation, and workflow redesign that reduce cost and cycle time.

Cybersecurity. Security program maturity, risk frameworks, zero trust, and identity management.

Cloud & Systems. Cloud migration, hybrid architecture, cloud operating models, and FinOps.

Differentiators

- Senior practitioners on every engagement — no leverage-model staffing.
- Execution focus: strategy through delivery under one roof, with measurable outcomes defined up front.
- Deep Microsoft data platform expertise (Fabric, Power BI, Power Platform) alongside vendor-neutral advisory.
- Structured, evidence-based methods — readiness assessments before build commitments.

Past Performance

- Operations modernization — case study at www.griphcon.com/case-studies.
- Financial services digital transformation — end-to-end delivery with measured outcomes.
- Supply chain visibility program — data strategy through analytics deployment.
